

Kamran Yusupov

Frontend Engineer · Lisbon, Portugal

hello@kamran.dev · kamran.dev

Frontend engineer who ships interfaces that feel inevitable. Eight years across product teams, design systems and platform work, with a bias toward boring technology and measurable performance.

Experience

Northline 2022 - Present

Lead frontend across three concurrent booking and logistics platforms. Own the architecture, the design system and the release process.

- Rebuilt the booking flow around a single state machine, cutting median completion time by roughly a third.
- Introduced a shared token layer so four products inherit one visual language.
- Took the worst dashboard from 4.4s to 1.2s first interaction on a mid-tier laptop.

Cobalt Labs 2019 - 2022

Second frontend hire at a Series B SaaS company. Consolidated four competing visual languages into one system.

- Built the component library and its documentation site, still in use four years later.
- Moved a single bundle to route-level code splitting: 4.1s to 1.3s first interaction.
- Ran an incremental framework migration with weekly production releases and no rollback.

Independent practice 2017 - 2019

Scoped engagements with founders and small product teams, taken end to end.

- Delivered marketing sites, storefronts, booking systems and internal tools.
- Two client sites from this period are still running largely untouched.

Skills

TypeScript, Vue 3, Nuxt, React · SCSS, design tokens, component systems · GSAP, ScrollTrigger, motion design · Vite, Webpack, CI bundle budgets · Accessibility, visual regression testing · Performance profiling and Core Web Vitals
